

BRINGING YOU 20+ YEARS

OF FACILITY & PROPERTY
MANAGEMENT INDUSTRY EXPERIENCE

Simplify User Experiences for Facilities and Property Management with Tailored Business Processes.

iviva DX facility is an all-in-one Facility Management, CMMS (Computerized Maintenance Management System) and CAFM (Computer-Aided Facility Management) No-Code platform; a simple yet scalable software designed to streamline maintenance operations, efficiently manage teams, and help elevate staff satisfaction.

Organizations looking to digitize can create and modify processes more easily with the help of the iviva DX facility.

Speed

Enables rapid development and deployment of applications and workflows, ad reducing time-to-value for new processes and applications.

Collaboration

Facilitates collaboration between business and teams, breaking down silos and promoting cross-functional teamwork.

Accessibility

DX No-Code is designed to be user- friendly, allowing users with varying technical backgrounds to participate in the process design and automation.

Flexibility

Allows for quick modifications to processes, enabling organizations to respond rapidly to changing business requirements without extensive coding efforts.

Scalability

Can scale as organizational needs grow, accommodating an increasing number of users and processes.

Cost-Efficiency

Eliminates the need for extensive coding, resulting in cost savings in terms of development time and resources.

The iviva DX facility has all the features you require to manage your maintenance tasks in an easy and economical manner.

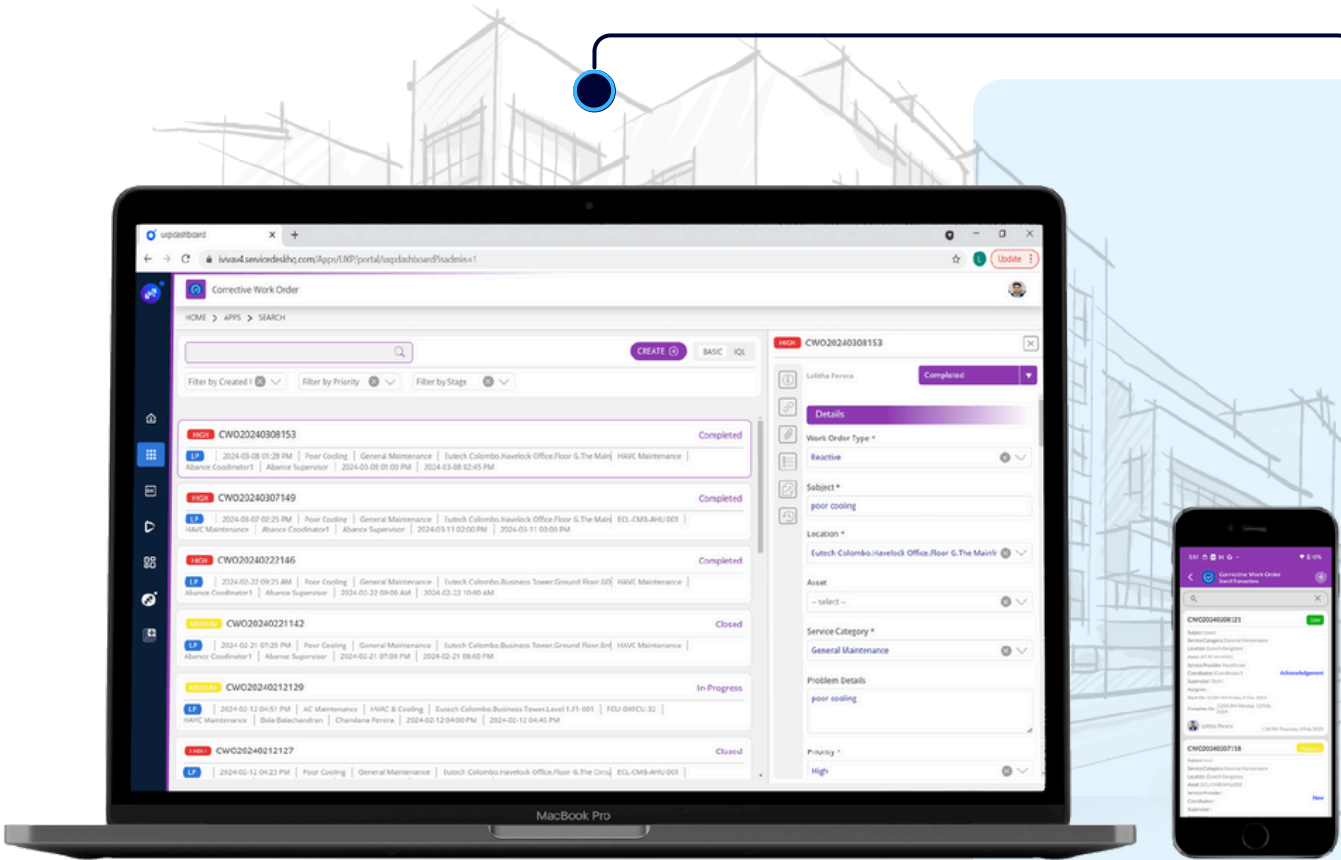

Portals, Dashboards, and Widgets

Iviva DX facility provides a set of user experience portals and dashboards with user interactions based on your organizational responsibilities and job roles. The collection of widgets in the user experience portals and the dashboards showcase your summarized information and exceptions related to your organizational operations. This will give you a clear insight and pave the way for you to make right decisions and take correct actions on time.

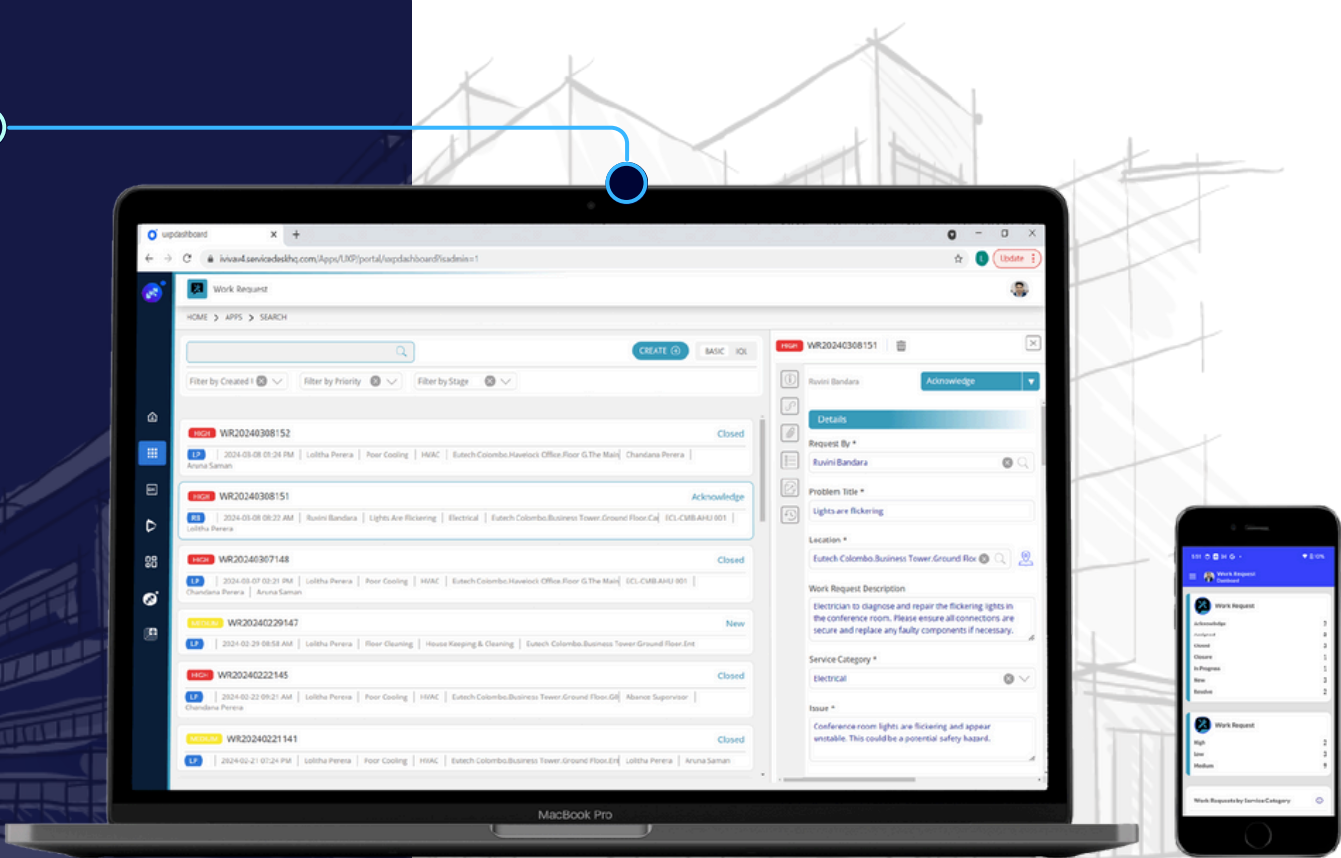

Corrective Work Orders

Manage and track work orders, labor, parts, performance and expenses; analyse daily, weekly and monthly data to make improvements, and control labor & maintenance costs. Auto assign work orders to service providers, supervisors or technicians.

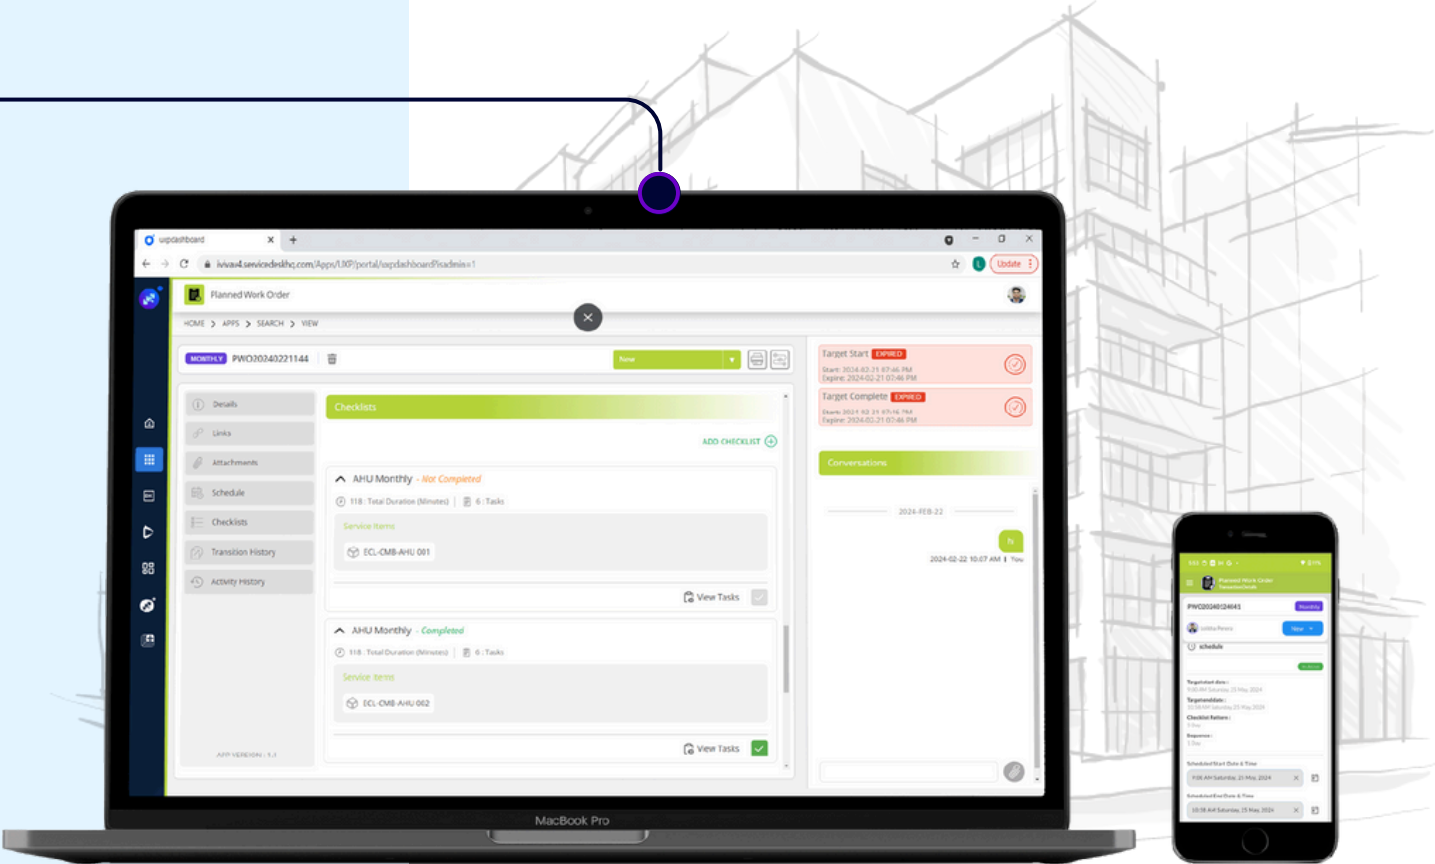

Work Requests

Staff can create Work Requests (WR) independently. Seamlessly connect WR with Work Orders (WO). Automated updates to requesters based on WO status changes. Collect ratings and feedback on completed work.

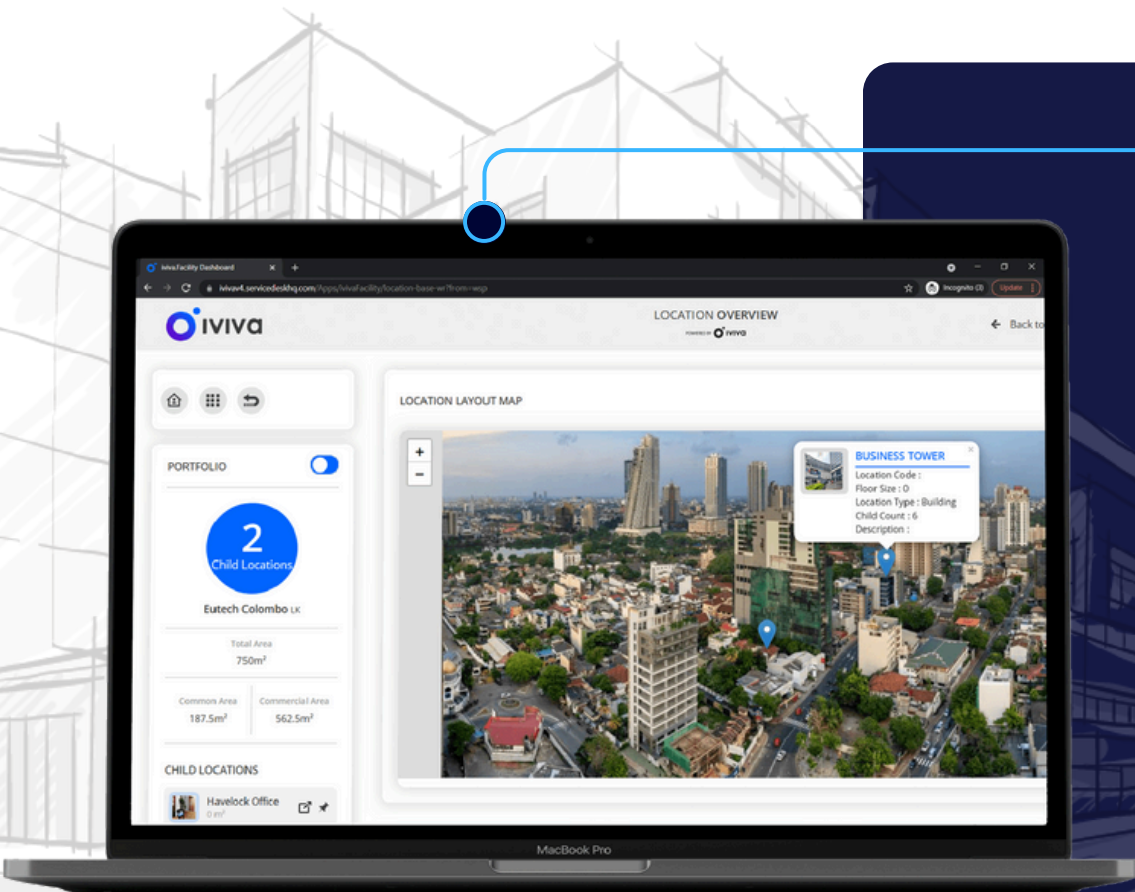

Planned Maintenance

Keep track of routine maintenance and reduce downtime, unplanned equipment failures, and extend the life and reliability of your equipment/assets. Schedule service audits and equipment/ asset-inspection related tasks.

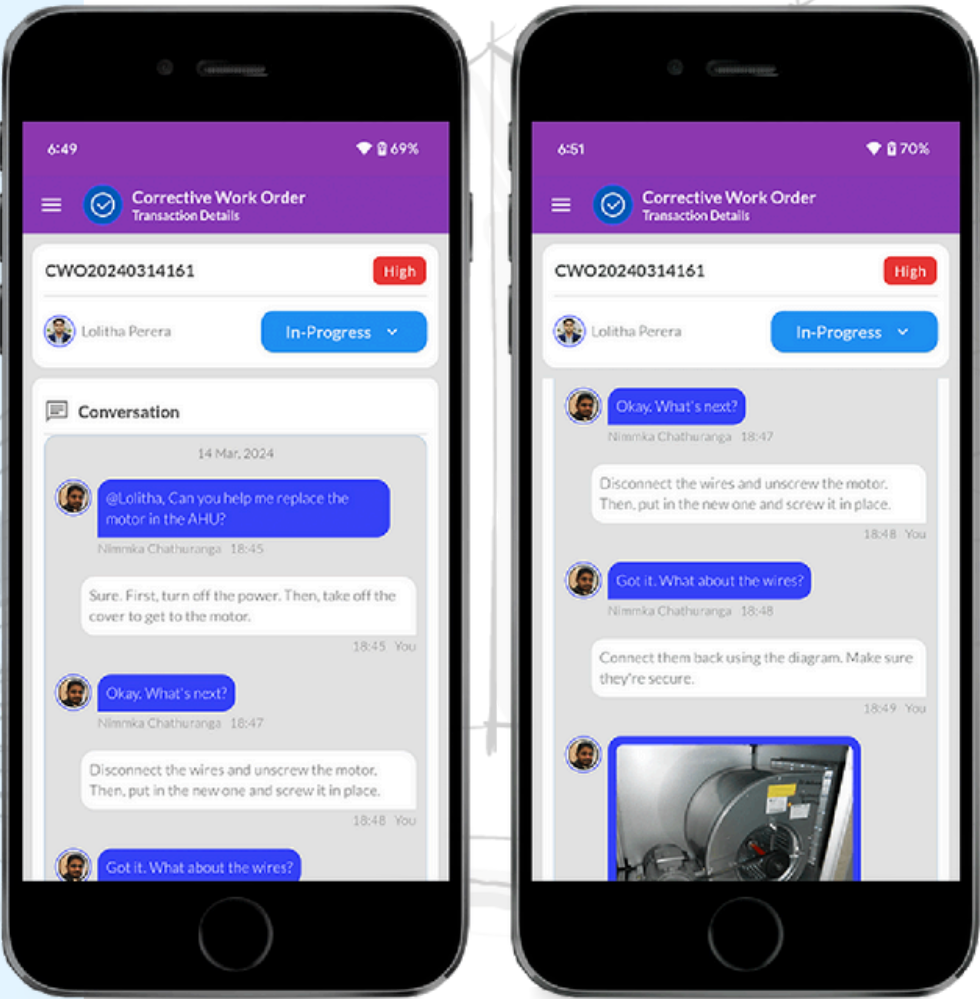

Location Register

Manage your sites, building locations & spaces, and specify location hierarchy. Maintain detailed logs of active repairs & repair history, PPMs, and audits of each location.

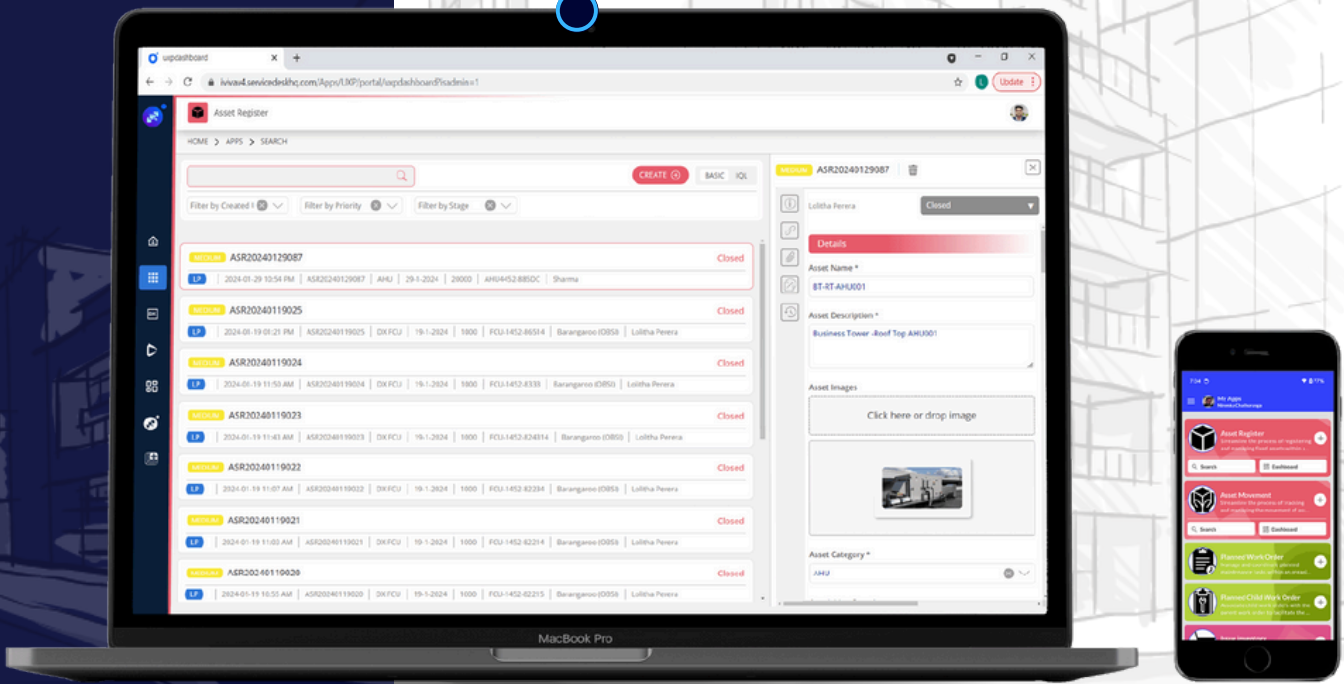

Transaction Based Conversation

Improve communication between team members who are actively involved in resolving issues or perform preventive/corrective tasks.

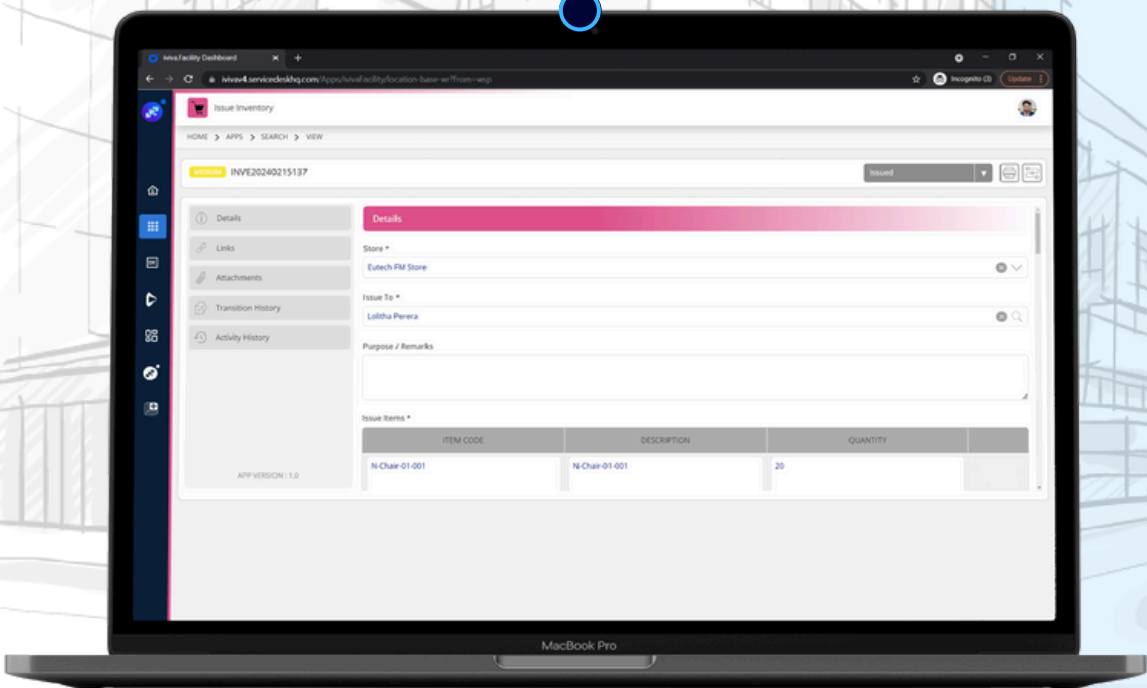

Asset Register With Process Flows

Record critical asset data such as warranty, insurance, depreciation, repairs, downtime etc. Automatically associate maintenance work (Corrective Work Orders, PPM) with assets.

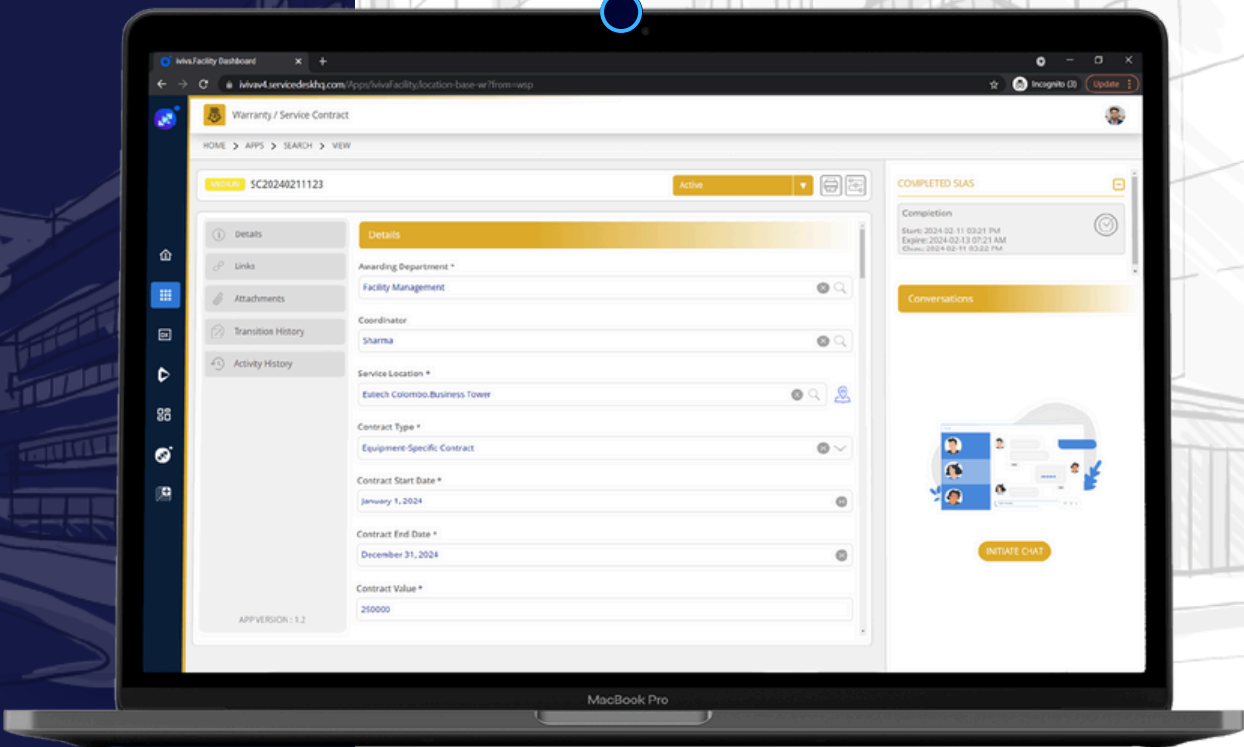

Inventory Tracking processes

Streamline inventory tracking process and avoid overstocking/ understocking. Plan supplies with the support of re-order thresholds. Keep records of inventory items issued to manage Corrective Work Orders.

Service Provider and Contractor Registration

Keep records of all your service providers and service contracts in one place. Track vendor performance, warranty contracts and ratings across your service providers.

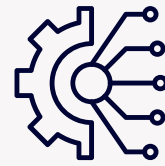

Capabilities

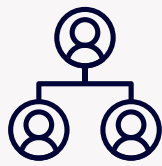

Workflow Automation

DX No-Code enables users to implement rule-based logic to define how processes should behave based on specific conditions, events, or triggers.

Integration

DX No-Code offers pre-built connectors to popular third-party applications and services, simplifying the integration of data and functionalities and providing APIs without manual coding, streamlining data exchange between different applications.

Data Management and Databases

DX No-Code creates and manages databases without coding. Users can perform data manipulation, filtering, and transformation within the platform.

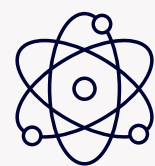

Reporting and Analytics

DX No-Code allows users to create custom reports and dashboards for data analysis.

Mobile App Development

DX No-Code supports the development of mobile applications that work seamlessly across various mobile devices and platforms, such as iOS and Android.

AI and ML Integration

DX No-Code offers integrations with AI and machine learning (ML) services, enabling the incorporation of intelligent capabilities into applications.
